

Mitel Line Interface Module

This module integrates into the Mitel MiVoice 5324, 5330, 5340 and 5360 IP Phones to provide a separate connection to an analog line, such as those found on DSL services, in the event of wide area network failure.

The Mitel Line Interface Module is a discrete optional module that integrates into the Mitel MiVoice 5324, 5330, 5340, or 5360 IP Phones and provides a separate connection to an analog line, like those found on DSL services.

In the event of a wide area network failure, the phone automatically uses the PSTN to provide continued basic telephony until service is restored. The teleworker can use the analog line for emergency calls and for local calling.

This unique module:

- Enables incoming and outgoing analog PSTN calls directly from an IP phone
- Supports survivability (failover) in the event IP connection is lost
- Provides emergency dialing support through the analog PSTN connection
- Enhances the Mitel Teleworker Solution and extends Mitel's resiliency strategy for IP communications from the core of the network to the desktop

For information on product and application interoperability, please contact your nearest Mitel office.
