

# MiVoice 5370 IP Phone

The MiVoice 5370 IP Phone is suitable for heavy telephone users, such as call center agents.

As a standard, 12 freely configurable keys are available for team, control and alarm functions.

The MiVoice 5370 IP Phone can be equipped with a headset. Based on the DHS standard, the headset can be used to control the volume, as well as to accept and clear down calls.

Significantly reduced LAN (Local Area Network) cabling requirements thanks to an integrated mini switch. Using this mini-switch connection, additional network terminals (e.g. PC, printer) can directly be connected. All models can be powered via Power over Ethernet (PoE) or from an optional mains power supply adapter.

The MiVoice 5370 IP Phone can easily be expanded with one additional keypad.

## Application areas

- Advanced feature telephone
- Key telephones, line keys
