

MiVoice 5380 IP Phone

The MiVoice 5380 IP Phone is a multi-functional terminal for most demanding users.

Its practical functions such as automatic call-back, call forwarding and conference call help improve efficiency and save time during your daily routine. In addition to its large back-lit display, the MiVoice 5380 IP Phone has an integrated alphanumeric keyboard which saves users valuable time when searching for contact names or when writing text messages. Practical functions such as automatic call-back, call forwarding and conference call also help improve efficiency during your daily routine. In order to protect the telephone against unauthorised use, it can be allocated an access code.

Increased productivity thanks to an expansion keypad

Users have the option of extending the MiVoice 5380 IP Phone with up to three additional keypads each with 20 keys or with LCD display-based expansion keypads, each with 15 keys. The actual status of a function is visually indicated by a red or a green LED integrated into each key. Depending on the displayed colour you can immediately see, for example, whether a team member is on an external or an internal call.

Flexibility

The angle of the MiVoice 5380 IP Phone system telephones can be set to either 25 or 40 degrees to best suit the room's lighting conditions. This guarantees that you always have an optimal view of the display. Naturally, the telephone can also be wall mounted if desired. All MiVoice 5380 IP Phones within a company can be configured via a Web interface, which considerably reduces the work of the system administrator.
